Solar Charger Power Bank Description

- 1) This GGXingEnergy® solar charger power bank is perfectly combining solar panel and power bank. You will never worry the solar panel without battery to store power again or the power bank can be only charged via wall outlet again. Battery capacity is up to 10000mah or 20000mah, your phone will get stable current for charging via this solar charger power bank. And the battery can be quickly charged via the solar panel. So you can get charging at anytime and anywhere.

Foldable • Portable to Stash in the Bag

- 2) The installed 4.5w solar panel is 3pcs 1.5w ones with foldable design for convenient use. You will not lose the solar panel and it can be folded for easy carrying. High grade efficiency solar cells are used to ensure the good charging for the battery.

- 3) Except general USB wired charging, it is also equipped with wireless charging. When you do not have an USB charging cable in hand and your phone accepts wireless charging, you just need to put your phone on the solar charger power bank, it can be charged. This solar charger power bank supports up to 3 devices simultaneously (2 x USB 5V2.1A + 1 x wireless 5W1A). The USB charging port can fit for almost all brands of phones and other 5V USB supported rechargeable units. The wireless charging is compatible for almost all phones which support wireless charging on market.

- 4) It is not only a solar charger power bank, but also a LED flashlight. There are 3 gears can be adjusted in 3 modes, illumination, SOS, and flashing. This is very handy and convenient as camping or emergency light.
